

Problem Statement:

In today's competitive technology landscape, aspiring developers, students, and professionals constantly seek to enhance their coding, problem-solving, and technical skills. However, many face challenges such as:

- Using different platforms for practice, contests, and interview preparation, leading to fragmented learning.
- Limited access to structured learning paths and personalized guidance.
- Difficulty in tracking progress, measuring performance, and benchmarking skills against peers.
- Lack of a unified platform that integrates practice problems, coding contests, tutorials, and career opportunities.

Coders World aims to address these challenges by providing a **comprehensive coding ecosystem** where users can:

- Practice coding problems across multiple domains and difficulty levels.
- Participate in coding contests, hackathons, and real-world challenges.
- Access structured learning paths, tutorials, and interview preparation resources.
- Connect with career opportunities through coding-based assessments and challenges.
- Collaborate, compete, and learn in a vibrant community-driven environment.

By bringing all these features into a single platform, **Coders World** creates an all-in-one solution for coding practice, competitive programming, and career advancement.
